

Resilient Food Systems

by Dr. Alesandros Glaros

Postdoctoral Research Fellow

Food and Agriculture Institute at the University of the Fraser Valley

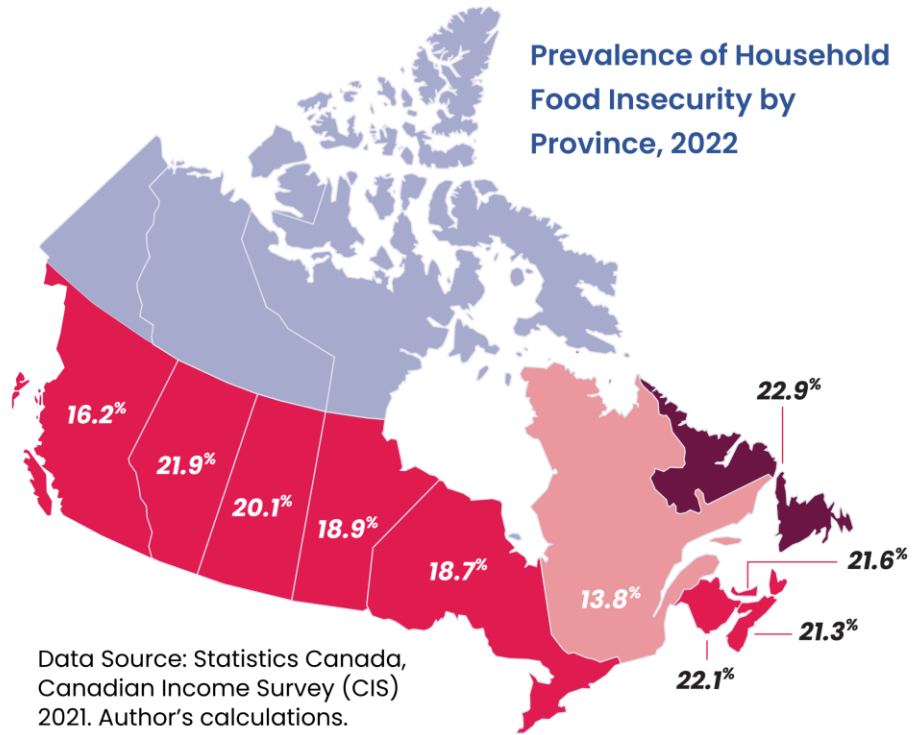

Food System Resilience

“A resilient food system is able to withstand and recover from disruptions in a way that ensures a sufficient supply of acceptable and accessible food for all”

- Center for a Livable Future

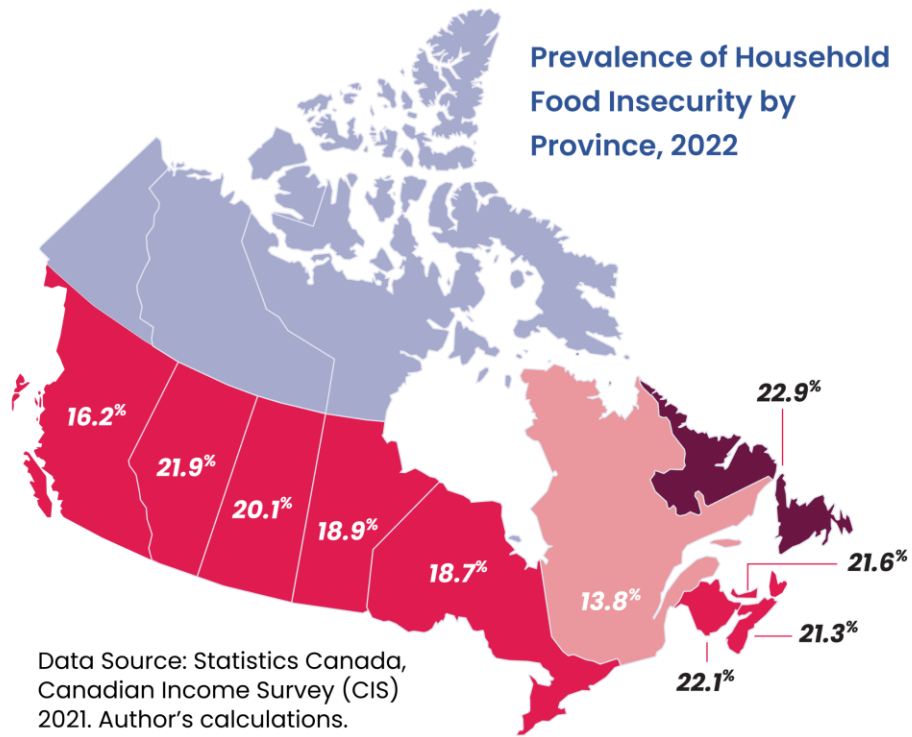

Prevalence of Household Food Insecurity by Province, 2022

Data Source: Statistics Canada, Canadian Income Survey (CIS) 2021. Author's calculations.

Transformation for Resilience

Redesigning food systems to
mitigate threats and disruptions

Strategies for Transformation

Producing More, Everywhere, in Any Way

A screenshot of the Shojinmeat Project website. The header is yellow with the text "Shojinmeat Project" in black. Below the header, there are social media icons for YouTube, Japanese, and English (US). The main content area features the text "SHOJINMEAT" in large, bold, black letters. Below this, there is a description: "an-source cell-based meat: lunar agriculture by citizens". There are links for "twitter" and "General Info". At the bottom, it says "Open Source Cell-Ag". On the right side of the page, there is an illustration of a character with blonde hair and a purple outfit, standing in front of a futuristic cityscape with tall, dark buildings.
